

Recycle Right

Recycling is a great way to save natural resources. You can recycle paper, glass, plastic, cardboard, and metals!

LOOK FOR ME!

WHEN

PETE RECYCLING PLASTIC

When recycled materials are not disposed of properly, they can affect places like the ocean, forests, and even our own backyards!

Make sure your recyclables are clean and dry before putting them in the bin. Food waste left on recyclables will contaminate them, stopping them from being able to be recycled.

Fun FACT- Food waste like like banana peels, apple cores, and potato peels can be composted! Keep recyclables out of plastic bags- plastic bags don't belong in the bin. You can drop off bags at your local grocery store.

You can help by making sure you recycle right and help clean up any litter you may see! Remember, only recyclable materials go in the recycle bin, trash goes in the trash can.
